

# How many apples is this man holding?

If you answered "one," you would be correct, assuming the seeds of this apple never produced a new apple tree.

If, however, you thought that the seeds of this apple could produce many more apple trees that would each have hundreds of apples . . . and the seeds of those apples could produce thousands of new trees with millions of apples . . . and so on. Your answer might be in the billions!

- Only God can see the apples in a seed.
- Even bruised, neglected, beat-up apples still have seeds inside them.
- The appearance of the apple doesn't change the potential of producing fruit.

This is another way to look at the power and potential of multiplication! How can the following statement give you insight into your responsibility in helping someone reach the goal?

**"Give me a fish,  
and I eat for a day.  
Teach me to fish,  
and I eat for a lifetime."**
